

**FOR IMMEDIATE RELEASE**

## **Harvest Energy Authorized Dealer Plans Open House**

### **Dedication of GreenVersity retail complex and power-up of solar energy system**

Jackson, Mich.; August 10, 2016: Harvest Energy Authorized Dealer, GreenVersity has taken a part of the rural landscape of Dexter, Mo. and dedicated it to advancing sustainability, renewable energy and agricultural services. The open house of the new GreenVersity retail and educational center is scheduled for Saturday, September 10, 2016.

District 151, House of Representatives, Tila Rowland-Hubrecht, will be in attendance during the open house for the new facility. Along with the dedication of the GreenVersity Retail Center, Ms. Hubrecht will 'Power-Up' the building's solar energy installation. A 10kW rooftop solar array will be highlighted, which will include real-time monitoring.

The center is located at 1430 North Outer Road. Centrally located between One Mile Road exit and Hwy AD exit on the north side of the outer road. "We chose this location to expand the growth of Dexter, Mo. and provide easy access to increasing traffic off highway 60," said Janet Palmer, one of the principal partners and developer of the complex.

This cutting-edge facility, with its modern architecture, will be equipped with the latest in technology to educate the public on the importance of preserving our environment and saving energy. Along with a monitoring system that will show the power being generated by the solar energy system, the center will feature a twelve-foot, high-volume, low-speed (HVLS) fan, a 1.5kW off-grid solar energy kit, and a solar-powered water pump, are just a few of the products available for purchase. Outside, you will find a Harvest Solar Canopy, solar-powered charging table; Amish-crafted Harvest Cabin; and Harvest Shelter, above-ground storm shelters, on display.

"We have been researching a tremendous number of products to bring to the area that can enhance and improve the energy efficiencies of our homes, businesses and farms. We want to become the trusted retailer that keeps you powered wherever your journeys may take you," said Palmer.

As one of Harvest Energy Solutions' growing network of Authorized Dealers, the new retail and educational center will provide customers with a resource to renewable energy and other sustainable products. "This will be a welcome center for those people seeking more information on renewable energy and sustainability products that support reducing our carbon footprint," added Palmer.

"We applaud GreenVersity for their investment in this retail and educational facility for the Mid-South region," said Mark Olinyk, President/CEO of Harvest Energy Solutions. "Our partnership in promoting the use of renewable energy and energy saving products supports our goal to reduce our country's carbon footprint for a healthier, sustainable environment for our children, grandchildren and future generations."

Harvest Energy Solutions leverages more than 100 years of collective commercial equipment installation experience with a focus on solar photovoltaic (PV) and other renewable system designs and installations throughout the Midwest.

**GreenVersity LLC** is a privately-held company owned by Janet Palmer and Reese Palmer, located in Dexter, Mo. The mixed-use center creates a unique environment to provide sustainable energy and resources to the residential, commercial and agricultural community throughout the Mid-South. GreenVersity is committed to creating an environment for education, product and service resources that support reducing the carbon footprint for future generation. For more information visit:
